Journal

The project started with choosing five different Lego elements, which I didn't think much of, so I randomly grabbed five Legos at the end of class. In the moment, I wasn't thinking that I would have to create an actual thing out of them. After playing around with different configurations, I landed on what, to me, looks he most like a duck, but not really, so I named it "The F**cked Duck", "The F**cked Alligator" and "Dive In!" Once I had the shape I was going to model, I took measurements of the Legos, which was pretty straightforward. I honestly don't think the modeling of the Legos was that hard; the only part that took a lot of patience on my end was getting the tape measurement to work. I then just took all of the images and created the instruction manual. Overall, it was a pretty straightforward assignment.
